ABSTRACT

In December 2023, UNHCR conducted a comprehensive Results Monitoring Survey (RMS) in Burkina Faso to assess the impact and outcomes of its assistance programs across various groups, including internally displaced persons (IDPs), host communities, refugees, asylum seekers, and returnees. This household-level survey collected data on education, healthcare, livelihoods, protection concerns, shelter, and water and sanitation. Utilizing a standard structured questionnaire, the RMS incorporated both household and individual-level indicators, ensuring statistically representative results. The IDP sample was sourced from the Conseil National de Secours d'Urgence et de Réhabilitation (CONASUR), while the refugee and asylum seeker sample came from UNHCR's ProGresv4 registration database. Host community data was gathered through two-stage cluster sampling from 2019 population census enumeration areas. Data collection was performed using both Computer-Assisted Personal Interviewing (CAPI) and Computer-Assisted Telephone Interviewing (CATI) methods. The survey encompassed 753 refugees and asylum seekers, 4 refugee returnees, 1275 IDPs, and 1209 members of host communities.

Sampling

SAMPLING PROCEDURE

The sampling strategy employed for the survey involved dividing refugee settlements into four zones based on cardinal directions, randomly selecting blocks within each zone, and systematically sampling households within those blocks using intervals determined by the total number of households, while for phone-based interviews, lists provided by UNHCR were randomized and respondents were selected proportionately by nationality.
