Overview

ABSTRACT

At the end of 2015, Herat Province was among the highest IDP hosting provinces in Afghanistan, accounting for approximately 10% of the country's IDP population. In order to obtain reliable information on the socio-economic conditions of IDPs and returnees in Herat Province, a comprehensive sample survey was carried out among 11,264 households in the 5 most populated IDP/returnee settlements (Shagofan, Jebraiel, Maslakh, Now Abad and Kahdistan) in 2017.

KIND OF DATA

Sample survey data [ssd]

Sampling

Sampling Procedure

The survey's objective was to deliver representative data of all IDPs and returnees living in the five most populated IDP/returnee settlements of Afghanistan's Herat Province, namely Shagofan, Jebrael, Maslakh, Now Abad and Kahdistan. The total population of IDPs/returnees in these settlements at the time of the survey was estimated at around 38,700 households.

For this survey a stratified, single-stage (i.e. non-clustered) sample design was applied. The five settlements were considered sampling strata. Within each of these strata, a sample of households was drawn systematically (based on alphabetic sort order) from the "list of inhabitants".

The total sample size was 11,264 IDP/returnee households.

NB: The original data collection also included a small number of households from the neighbouring host community; however, these observations were dropped from the public-release version of the dataset.

Deviations from Sample Design

None

Response Rate

Weighting

No weights were applied during the initial data analysis. However, given that selection probabilities differed across sampling strata, the public-release version of the data contains sampling weights calculated ex-post, which data users may wish to apply during further analysis.
