Overview

ABSTRACT
This survey was conducted to help UNHCR's Malawi office in its multi-year, multi-partnership planning and programming. The main objective was to provide an overview of the livelihood and vulnerability situation of refugees and host families in Malawi. The survey covered Dzaleka and Luwani refugee camps as well as households living in villages surrounding the two camps. Dzaleka camp is well established and has been in existence since 1994 and hosts households from a number of neighboring countries, including Democratic Republic of Congo, Rwanda, Burundi and others. Luwani camp is relatively new and much smaller camp that hosts exclusively Mozambican asylum seekers whose status was not yet determined at the time of the survey. The survey covered 1,026 refugee households (802 in Dzaleka and 224 in Luwani) during March 2017.

KIND OF DATA
Sample survey data [ssd]

UNITS OF ANALYSIS
Household and individual

Scope

NOTES
The scope of this socio-economic assessment includes:

- Identification of the household

- Characteristics of household members (demographics, education/literacy, economic activity)

- Specific needs

- Dwelling characteristics

- Access to services

- Asset ownership

- Safety/security

- Sources of income

- Agricultural production

- Expenditure

- Food consumption groups

- Coping strategies

- Assistance

- Media use

- Subjective wellbeing

TOPICS

Topic	Vocabulary	URI
Livelihood & Social cohesion		

KEYWORDS
Refugees, Asylum seekers, Forced displacement, Conflict

Coverage

GEOGRAPHIC COVERAGE
Dzaleka and Luwani camps, Malawi

UNIVERSE
All refugee and asylum seeker households residing in Dzaleka and Luwani refugee camps, Malawi.

UNHCR PPG: 1MWIA, 1MWIB

Sampling

Sampling Procedure

The survey's objective was to deliver representative data of all refiugees and asylum seekers living in Dzaleka and Luwani refugee camps. The total population of these camps at the time of the survey was estimated at around 7,000 households (around 6,300 in Dzaleka and 740 in Luwani; note that this estimate considers households, not registration cases).

For this survey a stratified, single-stage (i.e. non-clustered) sample design was applied. The two camps were considered sampling strata. Within each of these strata, a sample of households was drawn randomly (using a simple random number) from the registration list.

The total sample size was 1,026 refugee households (802 in Dzaleka and 224 in Luwani).

NB: The original data collection also included a small number of households from the neighbouring host community; however, these observations were dropped from the public-release version of the dataset since purposive elements were introduced during their sample selection and they cannot be considered statistically representative.

Deviations from Sample Design

None.

Response Rate

Information unavailable.

Weighting

No weights were aplied during the initial data analysis given that the data is self-weighting when considered separately within each of the two camps, and the initial analysis did not produce any aggregated results across camps. However, given that selection probailities differed between the two camps, the public-release version of the data contains sampling weights calculated ex-post, which data users may wish to apply during further analysis, in particular if results are to be aggregated across camps.

Questionnaires

Overview

All questionaires are provided in section "external ressources".

Data Collection

Data Collection Dates

Start	End	Cycle
2017-03-06	2017-03-29	N/A

Data Collection Mode

Computer Assisted Personal Interview [capi]

Data Collection Notes

Data was collected through computer-assisted face-to-face interviewing (using Kobo/ODK software).

Questionnaires

All questionaires are provided in section "external ressources".

Data Processing

Data Editing

The dataset presented here has undergone light checking, cleaning and restructuring (data may still contain errors) as well as anonymization (includes removal of direct identifiers and sensitive variables, and grouping values of select variables). Moreover, households interviewed from host communities were removed.

Data Appraisal
