Overview

ABSTRACT

Afghanistan hosts a protracted population of Pakistani refugees, who fled North Waziristan Agency in 2014 as a result of a joint military offensive by Pakistani government forces against non-state armed groups. As of May 2017, UNHCR has biometrically registered over 50,000 refugees in Khost province and 36,000 refugees in Paktika province, where access remains a challenge. Over 16,000 of these refugees receive shelter and essential services in the Gulan camp in Khost province, while most of the others live among the host population in various urban and rural locations.

To better understand the needs of the refugees and the host communities, UNHCR and WFP agreed to conduct a joint assessment of Pakistani refugees in Khost and Paktika. The data collection commenced in May 2017 and covered 2,638 refugee households (2,198 in Khost and 440 in Paktika).

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

Household and individual

Scope

NOTES

The scope of this socio-economic assessment includes:

- Identification of the household
- Characteristics of the household head
- Demographic composition of the household
- Housing characteristics
- Access to services
- Asset ownership
- Sources of income

- Consumption expenditure
- Debt
- Agricultural production
- Livestock ownership
- Food consumption groups
- Coping strategies
- Household Hunger Scale
- Shocks
- Child education
- Intentions
- Priority needs

TOPICS

Topic	Vocabulary	URI
Livelihood & Social cohesion		
Food security		

KEYWORDS

Refugees, Asylum seekers, Forced displacement, Conflict

Coverage

GEOGRAPHIC COVERAGE

Areas hosting Pakistani refugees in Afghanistan's Khost and Paktika provinces. This includes Gulam refugee camp as well as various non-camp sites, spread across 10 districts.

UNIVERSE

All Pakistani refugees living in Afghanistan's Khost and Paktika provinces.

Sampling

Sampling Procedure

The survey's objective was to deliver representative data of all Pakistani refugees living in Afghanistan's Khost and Paktika provinces. The total population of Pakistani refugees in these provinces at the time of the survey was estimated at around 18,000 households.

For this survey a stratified, two-stage (i.e. clustered) sample design was applied. The 10 refugee-hosting districts of Khost and Paktika were considered sampling strata, but within these the refugee-dense locations of Gulan camp and Lakan (in Maton district) were considered separate strata, resulting in 12 sampling strata overall. Within each of these strata, first a selection of villages was drawn with probability-proportional-to-size, then second a selection of households was drawn from UNHCR's registration database.

The total sample size was 2,638 refugee households.

NB: The original data collection also included a small number of households from the neighbouring host communities; however, these observations were dropped from the public-release version of the dataset.

Deviations from Sample Design

None.

Response Rate

Information unavailable.

Weighting

No weights were applied during the initial data analysis. However, given that selection probabilities differed across sampling strata, the public-release version of the data contains sampling weights calculated ex-post, which data users may wish to apply during further analysis.

Questionnaires

No content available

Data Collection

Data Collection Dates

Start	End	Cycle
2017-05-11	2017-05-29	N/A

Data Collection Mode

Face-to-face [f2f]

Data Collection Notes

Data was collected on paper through face-to-face interviews by 43 enumerators and 2 supervisors. Data entry was carried out at a centralized location using Excel software.

Data Processing

Data Editing

The dataset presented here has undergone light checking, cleaning and restructuring (data may still contain errors) as well as anonymization (includes removal of direct identifiers and sensitive variables, and grouping values of select variables). Moreover, households interviewed from host communities were removed.
