Overview

ABSTRACT
To allow for a proper understanding of the extent of the impact of COVID-19 on refugees in Uganda, the need was identified to carry out a Rapid Gender Assessment (RGA) to assess the impact of the pandemic on women, men, girls and boys of diverse backgrounds, including persons with disabilities, older persons and those with serious medical conditions. This assessment was conducted both in Kampala and across refugee settlements.

A mixed methods approach was used to address the central objectives of the study, including a review of secondary sources, a household survey and a key informants interview. The household survey targeted 1535 individuals, including vulnerable groups such as child heads of household, persons living with disabilities, and persons with serious medical conditions. The final locations included within the sample were Kampala, Kyaka II, Nakivale, Oruchinga, Adjumani, Bidibidi, Imvepi, Kiryandongo, Lobule and Rhino Camp. Those locations were selected to ensure that all regions and population groups were represented in the final sample of respondents.

KIND OF DATA
Sample survey data [ssd]

UNITS OF ANALYSIS
Individuals

Scope

NOTES
Demographic data; household economic activities and livelihoods; access to information; healthcare; education; menstrual hygiene; assistance; protection and security; priority needs.

TOPICS

Topic	Vocabulary	URI
Health		
Protection		
Community Services		
Livelihood & Social cohesion		
Gender Based Violence		
Child Protection		
Reproductive Health		

Information Management		
Health Care Referral Services		
Domestic Needs/Household Support		

Coverage

GEOGRAPHIC COVERAGE
Kampala, Kyaka II, Nakivale, Oruchinga, Adjumani, Bidibidi, Imvepi, Kiryandongo, Lobule and Rhino Camp

UNIVERSE
Women, men, boys and girls residing in refugee settlements, including vulnerable groups as PLWD, older persons with serious medical conditions, persons living with HIV and PLW.

Sampling

Sampling Procedure

The sample size was calculated using ProGres v4 data, including quotas for the folllowing categories: female HoH, female HoH with no adult male family member, male HoH with female adult family members, male child HoH, female child HoH, households having at least one PLWD, HH having at least one older person, and households having at least one youth. The sample was stratified by location.
A confidence level of 95% were used resulting in a sample size of 1791. The sample size was equally distributed across the locations, meaning that the target number of interviews for each location was 190.
There was insufficient people living with HIV, PLWD, and LGBTI individuals in the sample, and they were therefore excluded from the analyses.
