Overview

ABSTRACT

Household data was collected from 8 localities across the five Darfur states (Tawilla, Assalaya, Yassin, Sheiria, Nertiti, Undukum, Gereida, Jebel Moon). The profiling exercises in Darfur are aimed at: i. informing PBF programming and Action Plan development in each Darfur state/locality; ii. provide the baseline of the agreed upon PBF outcome/output indicators (for later measurement of impact); and iii. inform broader HDPN programming beyond the Fund. The sample size consisted of 10,914 households with a total of 60,154 individuals.

KIND OF DATA

Sample survey data [ssd]

UNITS OF ANALYSIS

Individual and household

Scope

NOTES

Household: Demographics, livelihoods, land and farming, food security, housing, access to services, participation in public events, social cohesion, perception about displaced population, intentions

Individuals: Demographics, education, livelihoods

Sampling

Sampling Procedure

Sampling Approach

The sampling followed a stratified multi-stage sampling approach in which villages were the primary sampling unit (PSU) and households were the secondary sampling unit (SSU), while stratification was done by target group. Accordingly, the first sampling stage consisted of selecting a sample of villages with probabilities that were proportional to size; villages with higher numbers of households had a higher probability of being selected for the survey. A random sample of households was then selected based on two approaches: systematic skips or systematic snowballing. This depended on the spatial distribution of the target groups in each village. For example, in all camps and return villages where only IDPs reside, systematic skips were done. In villages with more target groups, systematic snowballing was performed for each target group.

Sampling limitations & specifications

- The sampling is designed to produce results representative for each target group in the locality. Analysis at the village level is not possible and therefore no reference to villages or breakdown by villages is done in the report.
- The locations targeted for the survey were not selected randomly across the localities and thus do not necessarily provide representative results of all settlement situations in the localities. The targeting of location has been based on a conflict sensitive approach and the programmatic scope of the PBF. However, the area level analysis has looked at locality as a whole and thus counterbalance the survey scope which focused on the displaced target groups.
