TITLE

Joint UNHCR/WFP Post Distribution Monitoring - May, 2022

COUNTRY

Name	Country code
Rwanda	RWA

STUDY TYPE

Demographic and Health Survey [hh/dhs]

ABSTRACT

Until May 2021 all registered refugees in Rwanda received food assistance. Against the background of ever-limited resources and recognizing that the refugee population is not homogeneously vulnerable, in mid-2021 WFP and UNHCR initiated the shift to the targeted provision of food assistance based on needs.

A targeting strategy - developed by UNHCR and WFP with support from the Joint UNHCR-WFP Programme Excellence and Targeting Hub - was formulated with the following objectives:

- Identify vulnerable refugee households in need of humanitarian assistance and less vulnerable refugees with higher livelihood resilience who would benefit from livelihoods support;
- Ensure the greatest protection outcomes through strong community participation, communications with refugee communities and risk analysis to inform the approach.

This third JPDM (Round 3) was conducted in April and May 2022, about one year after targeted assistance was first introduced. Guided by the findings of the second JPDM and daily targeting work, the 3rd JPDM resulted in further adjustments to the sample design and survey methodology to accommodate UNHCR's and WFP's country-level information needs. The 3rd JPDM is composed of a quantitative household survey and qualitative Focus Group Discussions (FGDs) and Key Informant Interviews (KIIs) conducted in all five refugee camps across the country. Data collection took place between 20th April 2022 and 20th May 2022. Primary data and information were collected through a structured household questionnaire¹², 17 semi-structured Focus Group Discussions (FGDs), and 9 Key Informant Interviews (KIIs). This is an anonymous version of the quantitative household survey data.

KIND OF DATA

Sample survey data [ssd]

UNIT OF ANALYSIS

Households

Version

VERSION DESCRIPTION

v2.1: Edited, cleaned and anonymised data

VERSION DATE

2023-03-15

Scope

NOTES

Household: Demographics, food security, income generation and COVID-19 impact, expenditure and capacity to meet needs, vulnerability.

TOPICS

Topic
Food security
Protection
Community Services
Livelihood and Social cohesion
Income Generation
Water Sanitation Hygiene
Cash Assistance

Coverage

GEOGRAPHIC COVERAGE

Six refugee camps across the country: Kigeme, Gihembe, Kiziba, Mahama, Mugombwa and Nyabiheke

UNIVERSE

All registered refugees in UNHCR register server, ProGres, in Rwanda.

Producers and sponsors

PRIMARY INVESTIGATORS

Name
UNHCR
WFP

Sampling

SAMPLING PROCEDURE

In line with the sampling strategy of the first and second JPDMs in December 2020 and September 2021, the third JPDM aimed to provide statistically representative data and analysis on camp level for all six camps in Rwanda. In addition, to better understand the vulnerability status of households receiving various assistance since the targeting started, the sampling of the 3rd JPDM was also designed to be representative at the assistance group level. Similarly to previous assessments, the team used the total number of ProGres Groups by the time the survey was designed (March 2022) as the most reliable proxy to the total number of households, hence the sample frame. The sample size was planned to reach (a minimum of) 2,900 households in total with 95% confidence level and 5% margin error while factoring a 15% non-response rate. The distribution of the households by camp and by eligibility group was proportional to the distribution of number of the total population in each stratification. To account for relocation of refugees from Kigeme and Gihembe camps to Mahama camp as a factor that may confound our interpretation of targeting impact for Mahama in particular, Mahama sample included separate groups, each statistically representative of the corresponding population, for relocated (Congolese refugees who moved to the camp from Kigeme and Gihembe camps) and "not relocated" (Burundian refugees originally residing in the camp).

WEIGHTING

Weights have been calculated as the total households per group per location/selected households per target group per location
