### ABSTRACT

The UNHCR Results Monitoring Surveys (RMS) is a household-level survey on people with and for whom UNHCR works or who benefit from direct or indirect assistance provided by UNHCR, including refugees and asylum seekers, internally displaced persons, returnees, stateless and others of concern. The objective of the survey is to monitor impact and outcome level indicators on education, healthcare, livelihoods, protection concerns, shelter, and water and sanitation. The results contribute to an evidence base for reporting against UNHCR's multi-year strategies to key stakeholders.

The RMS can be implemented in any operational context. A standard structured questionnaire has been developed for the RMS, which can be conducted as a stand-alone survey or flexibly integrated with other data collection exercises. The data includes indicators collected at both the household and individual (household-member) level, and results are statistically representative.

This RMS took place in Burkina Faso from June 2022 to August 2022. The surveyed population was IDPs, refugees and asylum seekers in Burkina Faso. The sample frame for IDPs was taken from the "Conseil National de Secours d'Urgence et de Réhabilitation (CONASUR)" in December 2021 and for RAS (Refugees and Asylum-seekers), the sample was taken from UNHCR's registration database (ProGresv4). Both CAPI and CATI were used for data collection. Observations :667 (RAS) , 6 (Refugee returnees), 704 (IDPs) The latest submission date: 28 August 2022
